

Recycled Black Rubber Granules

American Recycling Center, Inc. produces its recycled black rubber granules with a multi-step grinding process that uses only the finest quality raw materials. Those raw materials are generated from industrial manufacturers who compound various polymers including EPDM, SBR hoses, and other natural rubbers to make our premium blend of finished granules. Starting with a feedstock that is free of wire, fiber, plastic, wood, and other undesirable contaminants creates a cleaner finished product.

Our Premium Rubber Granules are manufactured from virtually new industrial scrap rubber. The raw material is generated from molding and extrusion processes that create off-spec parts, obsolete inventory, and process waste material.

.5mm

Premium 1300

5/8 inch

Premium 3600

We can custom grind to your specification.
Commonly stocked recycled rubber:

.5-2mm 1-3mm 1-3.5mm
1-4mm 1-5mm 3-6mm

NON Tire Turf Infill Rubber

PremARC™ Turf Infill is produced from scrap rubber that is generated from industrial manufacturers - NOT TIRES
